INTRODUCTION

Access, security and automation systems.

DAV Group supplies, installs and services access, security, automation, parking control and renewable energy systems for residential, commercial and industrial projects. This catalog presents each system in the order it appears on the DAV website, with a short description of what it does and where it is used.

CATEGORIES

Entrances & Doors

- Roller Shutters System
- Industrial and Garage Door System
- PVC High Speed Door

Automatic Access

- Automatic Glass Door System
- Barriers Gate and Parking System
- Auto Gate Sliding System
- Auto Gate Swinging System
- Access Control System

Perimeter Control

- Rising Bollard System
- Roadblocker System

Security

- CCTV Cameras System
- Fire Alarm System
- UV Under Vehicle Scanners System

Renewable Energy

- Renewable Energy Systems

14 systems

CONTENTS

01 Roller Shutters System 5

02 Industrial and Garage Door System 6

03 PVC High Speed Door 7

04 Automatic Glass Door System 8

05 Barriers Gate and Parking System 9

06 Rising Bollard System 10

07 CCTV Cameras System 11

08 Fire Alarm System 12

09 Renewable Energy Systems 13

10 Roadblocker System 14

11 Auto Gate Sliding System 15

12 Auto Gate Swinging System 16

13 Access Control System 17

CLIENTS

Organisations DAV works with.

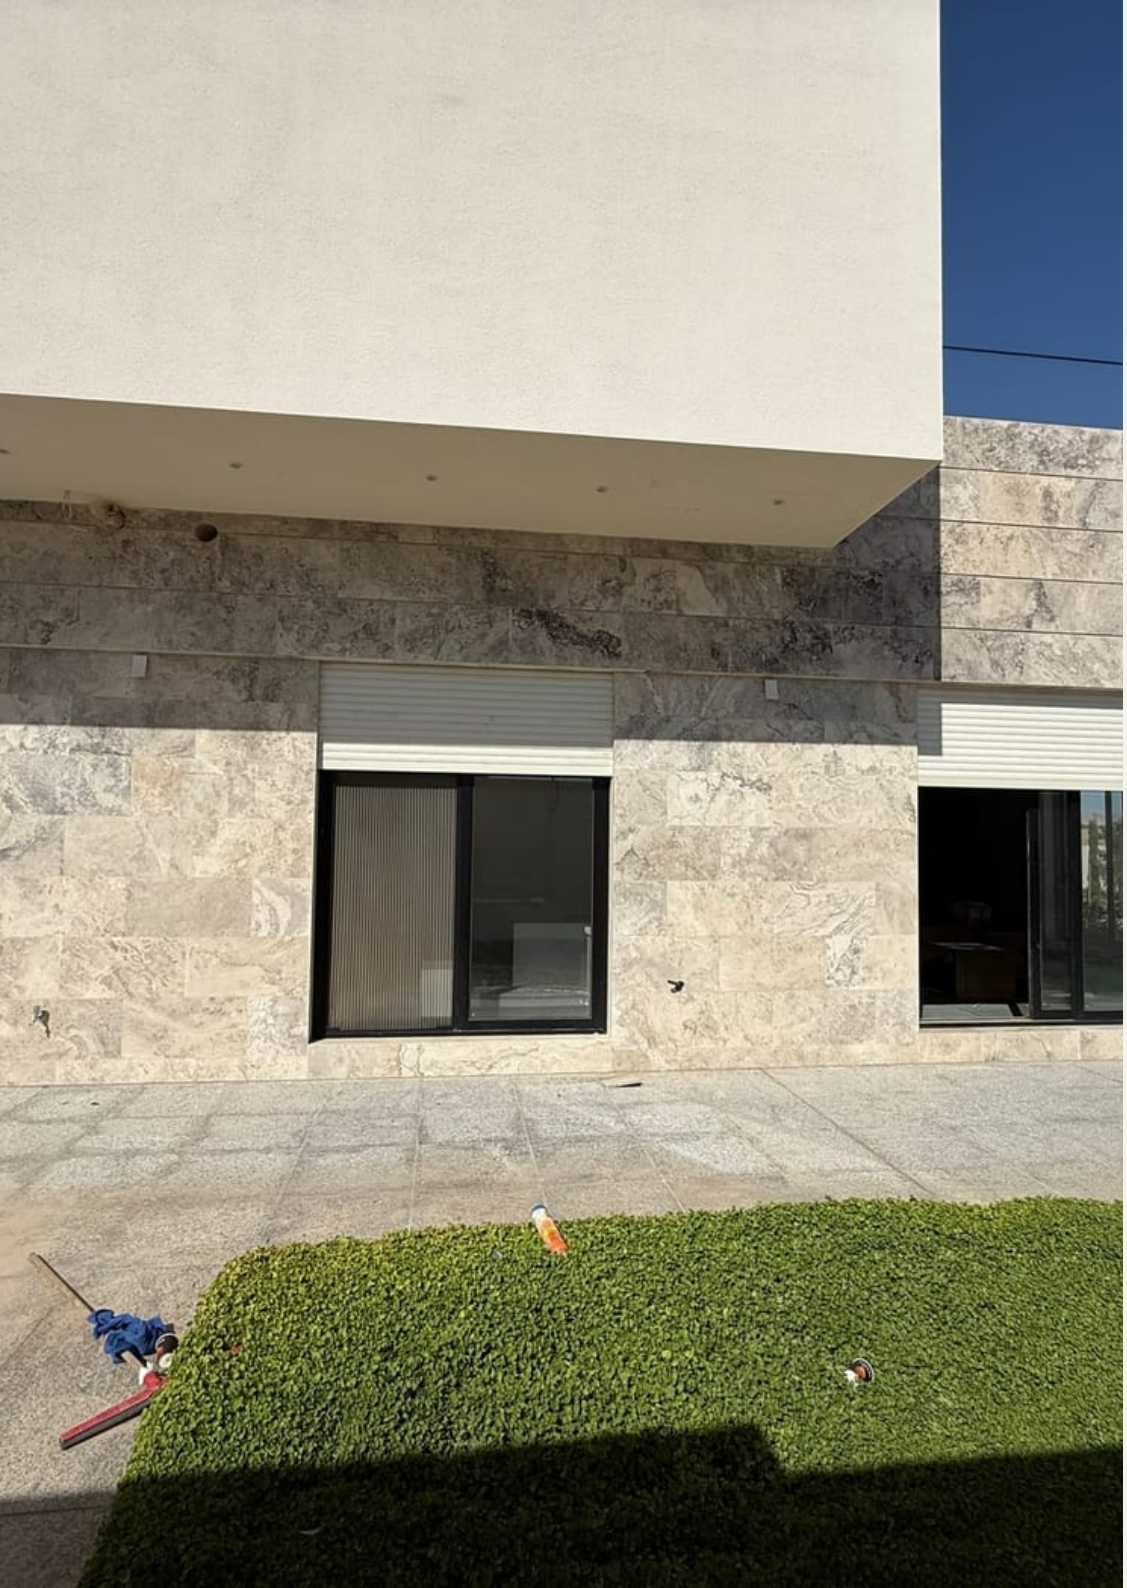

Roller Shutters System

Secure and durable shutter solutions for shops, warehouses and commercial properties, designed for smooth daily operation and reliable protection.

Security · durability · easy operation

- Manual and motorised operation.
- Suited to shopfronts, warehouses and residential openings.
- Built for repeated daily opening and closing.
- Installation and servicing handled by DAV.

Industrial and Garage Door System

Heavy-duty door systems built for industrial sites, service facilities and private garages where strength, safety and consistent performance matter.

Industrial use · safety · dependable access

- Sectional and overhead door configurations.
- Sized for loading bays, workshops and garages.
- Safety devices integrated with the drive system.
- Remote and wall-mounted control options.

PVC High Speed Door

Fast-opening PVC doors that help manage traffic flow, cleanliness and temperature control in industrial and logistics environments.

Fast movement · controlled environments · efficient operation

- Rapid opening and closing cycles.
- Helps separate temperature and cleanliness zones.
- Flexible curtain reduces impact damage.
- Suited to production, storage and logistics areas.

Automatic Glass Door System

Elegant entrance systems for offices, retail and hospitality spaces that combine convenience, modern design and dependable access automation.

Clean design · hands-free access · commercial use

- Sliding automatic entrances for high-footfall spaces.
- Sensor-driven, hands-free operation.
- Clean sightlines for office, retail and hospitality lobbies.
- Servicing and adjustment after installation.

Barriers Gate and Parking System

Vehicle access management solutions for compounds, parking areas and commercial sites, helping control entry and improve traffic organization.

Parking access · traffic flow · site control

- Boom barriers for entry and exit lanes.
- Integrates with access control and parking equipment.
- Suited to compounds, offices and commercial car parks.
- Layout planned around site traffic flow.

Rising Bollard System

Retractable bollard solutions designed to secure entrances and restrict vehicle access while maintaining a clean and professional streetscape.

Access restriction · clean integration · perimeter control

- Retracts flush when access is permitted.
- Protects pedestrian areas and building forecourts.
- Optional illumination for night-time visibility.
- Operated from control points or access systems.

CCTV Cameras System

Professional surveillance systems that help monitor people, spaces and operations with clear coverage for homes, businesses and larger sites.

Monitoring · recording · site visibility

- Camera selection matched to each area.
- Recording and storage set up on site.
- Coverage planned around entry points and open areas.
- Suited to homes, businesses and larger facilities.

Fire Alarm System

Early-warning fire detection systems developed to enhance building safety and support faster response in residential and commercial environments.

Detection · alerting · building protection

- Detection devices distributed through the building.
- Central panel for status and alerts.
- Audible and visual alerting devices.
- Residential and commercial installations.

Renewable Energy Systems

Clean energy solutions that support more efficient power use and help residential or commercial projects move toward sustainable operation.

Solar power · energy efficiency · sustainable systems

- Solar generation for rooftops and structures.
- Electrical integration with the existing installation.
- Residential and commercial scale.
- Layout planned around the available roof area.

Roadblocker System

High-security road blocker systems built to prevent unauthorized vehicle entry in sensitive, government or high-control locations.

Vehicle stopping · site defense · high-security access

- Wedge-type blocking across the driving lane.
- For sensitive and high-control entry points.
- Works alongside barriers and access control.
- Marked and illuminated for driver visibility.

Auto Gate Sliding System

Sliding gate automation for villas, compounds and commercial entrances, where the gate runs along the boundary rather than swinging into the driveway.

Sliding gates · space saving · reliable automation

- Rack-driven operator sized to the weight of the gate.
- Suits wide openings and short driveways.
- Safety sensors on the movement path.
- Remote, keypad and intercom entry options.

Auto Gate Swinging System

Swing gate automation for villas and compounds, with arm operators fitted to the leaves for quiet, controlled movement.

Swinging gates · quiet operation · controlled entry

- Arm operators fitted to one or both leaves.
- For driveways with room for the leaf to swing.
- Safety sensors on the movement path.
- Remote, keypad and intercom entry options.

Access Control System

Smart access solutions for managing and recording entry using secure methods suited to offices, buildings and controlled facilities.

Controlled entry · user management · secure access

- Card, code and biometric entry methods.
- User permissions managed per door or zone.
- Entry events recorded for review.
- Offices, buildings and controlled facilities.

UV Under Vehicle Scanners System

Under-vehicle inspection systems that help security teams check the underside of vehicles quickly and improve screening at controlled entry points.

Vehicle inspection · screening · checkpoint security

- Scans the underside of vehicles at entry.
- Speeds up screening at busy checkpoints.
- Deployed with barriers and road blockers.
- For controlled and high-security entrances.
